No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq length: 0

Discosoma

The present sequence is a novel fluorescent protein (nFP) encoded by the full-length cDNA drFP583. drFP583 was isolated from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa. Fluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cell or organism of interest. Unlike other markers used in protein labeling, such as beta-galactosidase and luciferase, fluorescent proteins do not require an exogenous cofactor or substrate. Methods involving fluorescent proteins are also less laborious and less disficult to control than the traditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorophore derivative. Novel fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and protein localization studies, and in fluorescence resonance energy transfer (FRET) reactions. They may have improved properties and better suitability for larger excitations compared to prior art fluorescent proteins such as green fluorescent protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
```

The present sequence is Discosoma sp.

red fluorescent protein drFP583.

The invention provides a nucleic acid CC protein (II) that differs from the

encoding sequence

functional red fluorescent of an Anthozoan red

These were Anemonia majano, Clavularia sp., Zoanthus sp., Discosoma sp. and Anemonia sulcata. The CDNA obtained was then screened in the search for sequences encoding fluorescent proteins. The other proteins found in this manner were cFP484, zFP506, zFP538, amFP486, dsFP483, asFP600, dgFP512 and dmFP592. These proteins can be used as fluorescent labels (for gene expression and protein localisation studies and in fluorescence resonance energy transfer (FRET) studies) in place of fluorophore derivatives and luciferases, as these involve laborious processes and the latter require cofactors. They can also be used in place of GFP, which is too stable to be useful when studying short-term or repetitive events
                                                                              Proteins for Fluorescence Resonance Energy Transfer (FRET) comprise functional red fluorescent proteins, and the encoding nucleic acids key mutations for improving the proteins function.
                                                                                                                                                                                                                                                                                                                30-AUG-2001.

The red fluorescent protein of the invention can be expressed by standard recombinant methodology. (II) are used a fluorescent markers and FRET partners. It is used for identifying protein-protein interactions. (II) is also suitable for multiplexed fluorescent proteins. (II) has improved brightness, reduced spectral cross talk, and is rapidly and efficiently expressed in mammalian cells. The key mutations in the encoding nucleic acids provide improved folding, brightness, and create (II) with sharper, more defined excitation and emission peaks when expressed in mammalian cells. The present sequence represents an anthozoan fluorescent protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 225 AA;
                                                                                                                                                                                                                                                                                                                                                          Yeast; red fluorescent protein; RFP; plant; transgenic; GFP; Saccharomyces cerevisiae; Nicotiana tabacum; Arabidopsis thaliana; Escherichia coli; green fluorescent protein; biotechnology.
                                                                       New DNA encoding red fluorescent protein, biotechnology, has sequence optimized for especially yeast or plants.

(I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of the yeast optimised RFP

The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) wild-type protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a fluorescent timer protein having an emission CC spectrum that changes over time after synthesis from a first wavelength CC to a second wavelength. The fluorescent timer proteins are useful in CC monitoring the activity of a promoter, determining the age of a protein, CC enriching a population of cells comprising a fluorescent timer protein. CC enriching a population of cells comprising a fluorescent timer protein. CC rive fluorescent timer proteins are also useful for assessing gene CC expression during development of a multicellular organism or during CC cellular differentiation, in response to a drug or other inducer of CC promoter activity, as a reporter to serve as a read-out of promoter activity, monitoring intracellular protein movement or translocation, CC protein trafficking, or protein stability, to investigate temporal CC visualisation of newly synthesised proteins and accumulated proteins, and CC visualisation of newly synthesised proteins and accumulated proteins, and ci distinguishing between newly formed and pre-existing structures, e.g. CC membrane junctions and extracellular matrix components. The fluorescent timer proteins and extracellular matrix components. The fluorescent componence in prokaryotic and eukaryotic cells, as selectable markers, as biosensors in prokaryotic and eukaryotic cells, in protease cleavage cassays, and as second messenger detectors. The nucleic acids can be used to assays, and as second messenger detectors. The nucleic acids can be used to generate transgenic, non-human plants or animals or site-specific gene modifications in cell lines. The present sequence is Discosoma sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches 225;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a modified yeast strain that contains, integrated stably and functionally in its genome, a genotoxicity cassette and a cytotoxicity cassette, each comprising a promoter and reporter gene, both of which are different in the two cassettes. The modified yeast strain is used to detect environmental pollution, especially genotoxic and/or cytotoxic substances in complex environmental contaminants, especially organic compounds, but also (non-)ionising radiation and chemical carcinogens. Particular applications are in monitoring (waste) water (e.g. as an early warning system), medical toxicology screening and for industrial process control. The present sequence is a marker protein suitable for use in the cassettes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modified yeast strain, useful to environment, contains integrated

                                                                             片
                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel non-oligomerizing fluorescent protein.

CC Specifically, it refers to the presence of at least one mutation in the CC fluorescent protein that reduces or eliminates the ability of the protein CC to oligomerize. The present invention describes fluorescent proteins CC derived from naturally occurring green or red fluorescent proteins and CC provides a fusion protein that comprises a non-oligomerizing fluorescent CC protein linked to at least one protein of interest. As such, these fusion CC proteins can be used in methods and compositions to determine the pH of a CC sample, or whether the sample contains an enzyme, molecule or agent that CC regulates the activity of an expression control sequence. Furthermore, CC they may be used to identify a specific interaction of molecules, such CC of molecular biology. This polypeptide sequence is the Discosoma sp. wild CC type red fluorescent protein (RFP) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to chimeric phosphorylation indicators comprising a phosphorylation polypeptide and a fluorescent protein or operative linkage, a donor molecule, a phosphorylatable domain, a phosphoaminoacid binding domain (PAABD) and an acceptor molecule. The phosphorylation indicators of the invention are useful for detecting kinases or phosphatases in a biological sample. They are also useful high throughput analysis e.g. for detecting a kinase inhibitor or phosphatase inhibitor. The present sequence is Discosoma species red fluorescent protein (RFP) used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel chimeric phosphorylation indicators, useful for detecting kinase/phosphatase in samples, has donor molecule, phosphorylatable domain, phosphoaminoacid binding domain, and acceptor molecule, in operative linkage.

The invention describes a polynucleotide sequence (I) encoding a CC Discosoma red fluorescent protein (DSRed) variant having a reduced compression amino acid substitutions at the AB CC and/or AC interfaces of the wild-type DSRed sequence (SI) comprising 225 cm in reduced propensity of the DSRed variant to form tetramers. (I) is CC useful for detecting transcriptional activity by providing a host cells conattining a vector which comprises (I) operatively linked to an CC expression control sequence, and an unit to assay the variant fluorescent protein fluorescence is indicative of transcriptional activity. A polynucleotide encoding a fusion protein is useful for the analysis of in vivo localisation or trafficking of a polypeptide of interest. A polypeptide marker is useful as markers to identify the location and amount of a ctarget protein produced, where the target protein and amount of a pollications involving fluorescence energy resonance transfer (FRET), which detects events as the function of the movement of fluorescent sensors for protein sinase and phosphatase activities or indicators for ions and molecules such as Ca2+, Zn2+, for identifying the protein of a first and second molecule, such as ca2+, Zn2+, for identifying the green for detecting induction of the marker, and control sequence of a molecule in a sample, for identifying a specific presence of a molecule in a sample, for identifying a specific contains an enzyme or for determining the ph of the sample. (I) is useful for identifying a region or condition that regulates the activity of an expression control sequence. This is the amino acid sequence of Discosoma wild-tyne red fluorescent protein or condition that regulates the activity of the protein protein

The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transformation of cells with a fusion protein of an orphan receptor protein with a fluorescent protein useful for identification of ligs to the orphan receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ligand; orphan receptor protein; fusion protein; fluorescent protein; cell expression; green fluorescent protein; GFP; GFP-1; wild-type GFP; GFPuv; Enhanced GFP; EGFP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Discosoma wild-type GFP variant protein SeqID26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID NO 26; 594pp; Japanese

CC (GFP)-like chromoproteins and fluorescent proteins exhibit some degree of CC homology, there are certain positions (referred to as 148, 165, 167 and CC 203; numbering corresponds to GFP) that are occupied by noticeably CC different residues in the two types of proteins. Mutagenesis of the CC residues in these key positions in, for example, a fluorescent protein, CC to those found in a chromoprotein is therefore proposed to confer CC chromoprotein activity on the fluorescent protein mutant, with CC chromoprotein being able to be converted into fluorescent proteins in a Similar manner. The invention also relates to expression constructs, vectors, host cells and host cell progeny comprising a nucleic acid of CC chromoprotein or fluorescent protein of an interconverted cc acid of CC chromoprotein or fluorescent protein of an interconverted cc interconverted mutant protein sof the invention. The interconverted cc interconverted mutant proteins of the invention. The interconverted cc compositions, pharmaceuticals, cosmetics and living organisms. Proteins activity can useful as colouring agents in, for example, food cc with chromoprotein activity are also useful as subscreens and selective filters. Chromoprotein CC untants having fluorescent protein and selective filters. Chromoprotein or CC compositions (e.g. the production of transgenic cells and organisms), and care also useful as sunscreens and selective filters. Chromoprotein CC untants having fluorescent protein applications, as biosensors in growaryotic and eukaryotic cells, as markers of whole cells to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chromoprotein; fluorescent protein; CP; FP; interconverted mutant; Cnidnarian; Anthozoan; labelling; colouring agents; pigment; analyte detection assay; selectable marker; subscreen; selective filter;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                derived from a Cnidnarian species, preferably a non-bioluminescent
Cnidarian species, and most preferably an Anthozoan species. The
Chidarian is based on the finding that although green fluorecent protein

Proteins with fluorescent protein activity can also be used as fluorescent timers, where the switch of one fluorescent colour to another (e.g., green to red) is concomitant with the ageing of the protein and is useful for determination of the activation or deactivation of gene expression. The present sequence represents a wild-type red fluorescent protein, DaRed, from Discosoma sp. that was used as a parent sequence for the generation of mutant proteins in an example of the invention.
                                          New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, usefi in molecular biology, e.g. in immunoassays or in tracking protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DBRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DBRed sequence, where the substitutions result in reduced propensity of the DBRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DBRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 225 AA;

CC The present invention relates to nucleic acid that encodes a rapidly CC maturing chromo or fluorescent mutant of a Cnidarian chromo- or fluorescent protein or its mutant. The protein is useful in applications CC involving nucleic acid encoding a chromo- or fluorescent protein and is CC useful for producing a chromo and/or fluorescent protein which involves CC growing the cell, whereby the protein is expressed, and isolating the CC protein substantially free of other proteins. The protein and is useful as polying chromo- or fluorescent protein and is useful as CC primers, hybridization probes, etc. The expression cassettes are perful for synthesizing related proteins. The chromoproteins are useful as particular composition of matter e.g. food compositions cassettes are particular composition of matter e.g. food compositions, pharmaceuticals, CC cosmetics, living organisms, e.g., animals and plants. The chromoproteins for biological analytes of interest and as selectable markers in recombinant CC plants and proteins find use as labels in analyte detection assays, e.g. assays for the fluorescent proteins find use as electable markers in recombinant CC plants and proteins find use as a labels in analyte detection assays, e.g. assays for the automated screening of arrays of cells expressing fluorescence contains, as e.g. in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and enkaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescent proteins and in vivo marker in animals. The fluorescent proteins assays to determine the phospholipid composition in biological membranes and as a fluorescent timer. The present sequence represents the wild-rune nergy as a fluorescent timer. The present sequence represents the

   Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                     85.5

hap 90-binding protein p59 - rabbit
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: A42386
R;Lebeau, M.C.; Massol, N.; Herrick, J.; Faber, L.E.; Renoir, J.M.; Radanyi,
J. Biol. Chem. 267, 4281-4284, 1992
J. Biol. Chem. 267, 4281-4284, 1992
A;Title: P59, an hap 90-binding protein. Cloning and sequencing of its cDNA
A;Reference number: A42386; MUID:92165768; PMID:1537818
A;Accession: A42386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Accession: T30944

<del>-</del>

SUBUNIT: Homotetramer.

PTM: Contains a chromophore consisting of modified amino acid residues. The chromophore is formed by autocatalytic backbone residues. The chromophore is formed by autocatalytic backbone condensation between Xaa-N and Gly-(N+2), oxidation of Tyr-(N+1) to didehydrotyrosine, and formation of a double bond to the alphanon nitrogen of residue Xaa-N. Maturation of the chromophore requires nothing other than molecular oxygen.

BIOTECHNOLOGY: Fluorescent proteins have become a useful and ubiquitous tool for making chimeric proteins, where they function ubiquitous tool for making chimeric proteins, where they function as a fluorescent protein tag. Typically they tolerate N- and C-

Note=Exhibits a smaller absorbance peak fluorescence emission spectrum peaks at

at 494 nm. 583 nm;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        terminal fusion to a broad variety of proteins. They have been expressed in most known cell types and are used as a noninvasive fluorescent marker in living cells and organisms. They enable a wide range of applications where they have functioned as a cell lineage tracer, reporter of gene expression, or as a measure of protein-protein interactions.

SIMILARITY: Belongs to the GFP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3 Swiss-Prot entry is copyright.
